1.) a.) On

b.) At, At, at

c.) On

d.) In

e.) in

f.) in

2.) The table illustrates a restaurant's average sales in three different branches in 2021. It is obvious that Maloboro Street has the best average sales between two others branches. Maloboro has 500 transactions followed by Gejayan Street (750) and Kalirang Street (350). On average, eat-in and take-away transactions amount between three restaurants are almost equal in each restaurant. With eat-in transaction in Maloboro Street ending slightly ahead in two of them. Not only that, take-away transactions in Maloboro Street also is the most then others. Also, we can notice that the most popular item in three branches mainly is chicken menu where Kalirang Street's popular item is Penyet chicken, Maloboro street's is Geprek chicken, and Gejayan Street's is Goreng Chicken. Overall we can conclude that Maloboro Street's branch is the most profitable branch with the highest number of transactions and transactions value (20 juta), in other hand Gejayan Street produce 15 juta of transactions value followed by Kalirang Street is 8 juta.

3.) Hello my name is Fenel Jethu Esheluel, people called me Jethu. I'm a student from Universitas Gadjah Mada with my Major is Electronics and Instrumentation. I have a big expectation in this major because i have a big interest in technology since i was a kid. One day, my father let me to used his smartphone which is in that day, touch screen is an advance technology where we only touch the screen without button, we can call a person. It's a mind blowing for me as a kid. Then in junior high school i was introduced by my teacher about Sensor, resistor, Capacitor, PCB, IC, and others, every component for direct current. Since then i have bigger interest in this knowledge. Until finally i successfully got into Universitas Gadjah Mada and introduced to mikrokontroler, IoT, Artificial Intelligence and programming. I'm getting more excited and curious about it. So i hope in this major i can be the great scientist especially in electronics and instrumentation so people can feel the benefit of my inventions.
